

# HOW TO MAKE YOUR OWN SIDEWALK CHALK IN 4 EASY STEPS

## YOU'LL NEED:

- ✓ Plaster of Paris powder  
(substitution: flour or cornstarch)
- ✓ Powdered tempera paint  
(substitution: traditional wet tempera paint)
- ✓ Silicone Molds or Cups  
(substitution: toilet paper tubes lined in wax paper)
- ✓ Water
- ✓ Mixing bowls and spoons

- STEP 1:** In a bowl, mix together about one cup of plaster of paris powder and about  $\frac{1}{4}$  cup water thoroughly. If the mixture feels especially runny, add a touch more of powder. If it's too thick, splash in a little more water.
- STEP 2:** To the powder and water mixture, add desired colored tempera powder and stir well.
- STEP 3:** Pour the liquid colored chalk mixture into the silicone mold and set aside to dry. After about 5-10 minutes, depending on the moisture level of the chalk mixture, the homemade chalk will be ready to pop out of the mold.
- STEP 4:** Create! Store chalk in an open air container so that the chalk does not mold from excess moisture.
